Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: .represented actual melting and not an inflow of glass from without. Finally, the perfectly homogeneous character of the glass and the unchanged appearance of the crystals as heating progressed gave no hint of any chemical decomposition. In the hope of obtaining a point of value for comparison with the melting points of the other feldspars, some time and patience were expended in trying to locate the lowest temperature at which certain evidence of melting appeared. We did not extend any single trial beyond a single day, so that our results can not pretend to establish the lowest point at which albite melts. Such an effort with a natural specimen known to contain impurities would yield nothing of value. Mitchell County albite showed signs of melting after four hours at 1100. Under a high power the crystal edges appeared weathered or toothed--strongly resembling the incipient melting of the ice on a frosted window pane. These extremely fine teeth could be followed through the slide on exposed edges. At 1125 (Plate XIX X 600) a four hours heating gave unmistakable glass in tiny pockets and lanes. The above experiments with the Clotidland albite were completed before we obtained the Amelia County material, but the latter proved to be so much nearer to the type of pure soda feldspar that nearly all the experiments were repeated with it, except that the crystal blocks were embedded in powdered crystals. We did not develop any new fact, however; the effects noted...
